Solo Ledger

A calm, private place to see your whole financial picture — what comes in, what goes out, and what you're worth — all on your own device.

ON YOUR DEVICE

PRIVATE & OFFLINE

NO ACCOUNT NEEDED

What Solo Ledger is

Solo Ledger keeps a running picture of your personal finances. Everything you type is saved **only on this device, inside your browser** — nothing is uploaded to a server, and you never sign in. Close the tab and your data is still here when you come back.

It answers three everyday questions:

Where's my money going?

Record income and expenses each month and watch your **rolling balance** carry forward — last month's leftover becomes this month's starting point.

What am I worth?

Your **net worth** is your everyday balance plus the value of every investment, tracked over time on one chart.

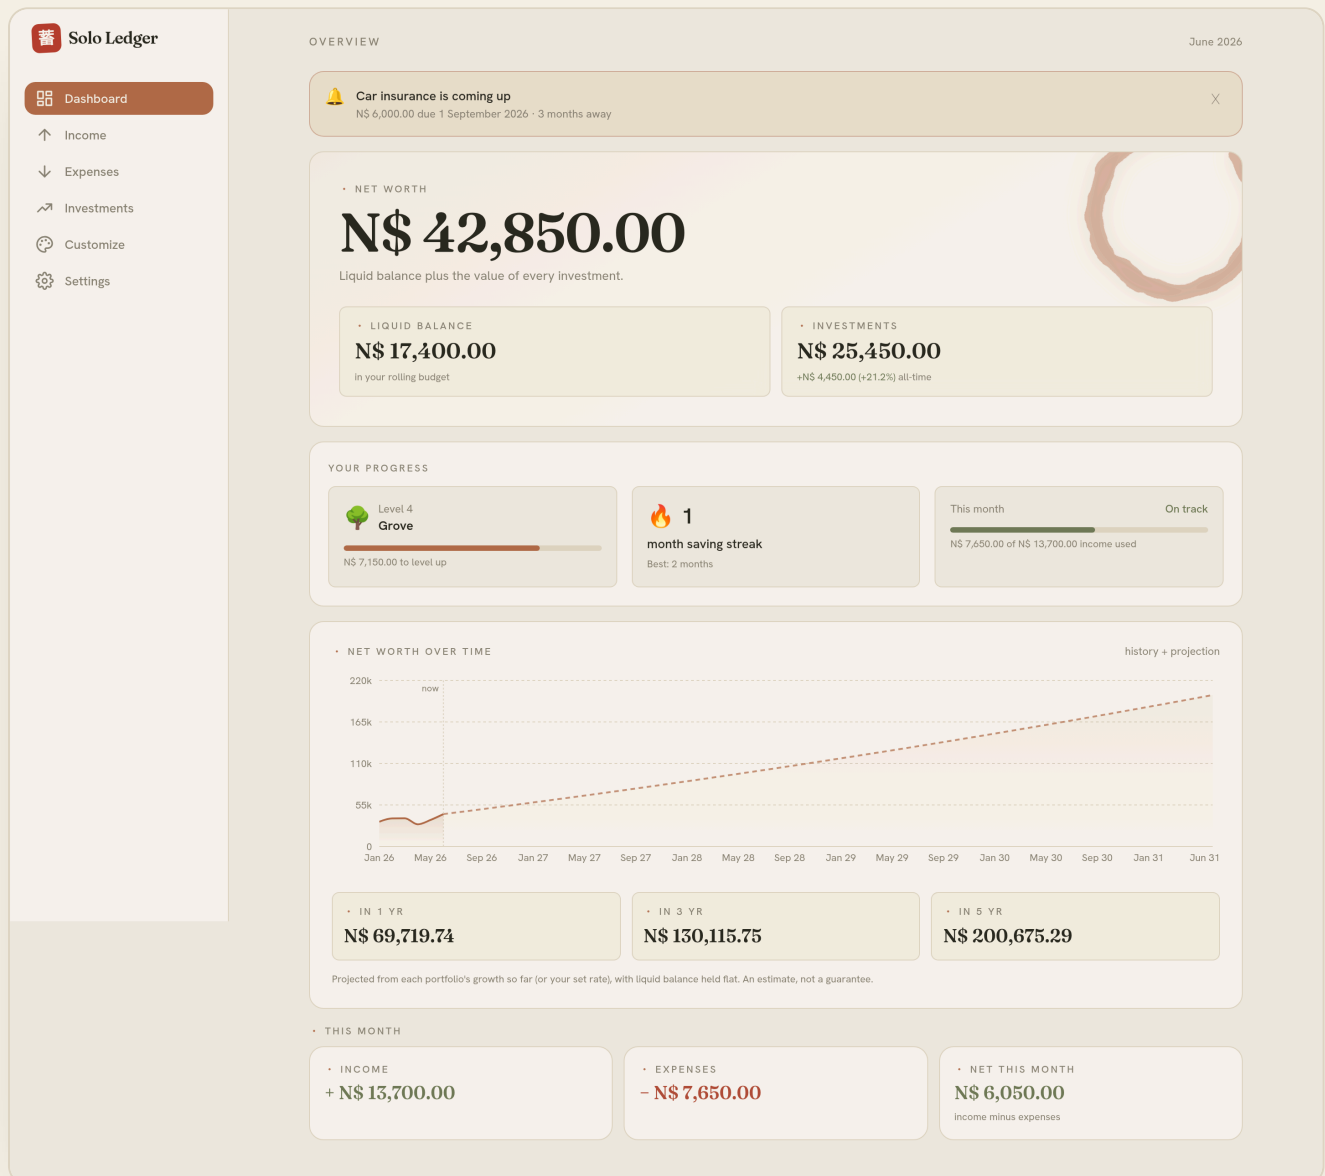

Five minutes to set up

- 1 **Open Settings** and set your **currency symbol** and **starting balance** — your bank balance today, so the ledger lines up with reality.
- 2 **Add your income streams** on the Income page (e.g. Salary, Freelance). The amount pre-fills each month.
- 3 **Add your expenses** — rent, groceries, a yearly insurance bill. Solo Ledger places each one in the right month automatically.
- 4 **Add any investments** and record their balance now and then to see real growth.
- 5 **Export a backup** from Settings now and then, so your data is safe if you switch devices.

Your dashboard

The Dashboard is a read-only summary — it invents nothing, it just mirrors everything you've entered elsewhere. It's the first thing you see when you open the app.

- 1 **Net worth** is the big number at the top: your liquid balance plus the value of every investment.
- 2 **Liquid balance vs. Investments** break that total in two — spendable money now, and money that's invested.
- 3 **Your progress** shows a gentle level, a saving streak, and how much of this month's income you've used. (You can hide this in Customize.)
- 4 **Net worth over time** charts your recent history, then continues past a “now” marker as a dashed projection — with 1, 3 and 5-year estimates in the cards beneath.
- 5 **This month** spells out income, expenses, and the difference between them.

Recording income

Income is organised into **streams** — your recurring sources of money. Each new month pre-fills with the stream's default amount, so you only adjust what actually changed.

- 1 Use the **month switcher** (top right) to pick which month you're recording.
- 2 In **Income for this month**, type the real amount received for each stream — it overrides the default just for that month.
- 3 To add a new source, type a name and a default in **Income streams** and press **Add**.
- 4 Untick **Active** to retire a stream without deleting its history.
- 5 The **rolling balance** at the top shows what carried in, plus this month's income, minus expenses, and what carries into next month.

Tracking expenses

Add an expense once and Solo Ledger works out which months it belongs to. There are three kinds, so a yearly bill doesn't have to be retyped every month.

- 1 In **Add an expense**, give it a **name** and **amount**.
- 2 Pick a **type**: **Monthly** (recurs every month — optionally for a set number of months), **Yearly** (lands on its due date's month each year), or **One-off** (a single month).
- 3 Set when it **starts**, then press **Add expense**.
- 4 Tick **Itemise** to build the total from individual items (qty × price, by store) — handy for groceries.
- 5 In **Your expenses**, click **Edit** to amend an expense **right where it sits** — Save or Cancel returns it to the list. X removes it.
- 6 The list shows **This month** by default; switch to **All-time** to see past one-offs. Use the **Show** chips to hide sections you don't need and **Sort** to order by name, amount or date.

Tracking investments

Each investment is a **portfolio** you update by hand — no bank linking. The clever part: Solo Ledger separates **real growth** from money you simply added, so your returns aren't flattered by deposits.

- 1 In **Add a portfolio**, enter a **name**, the date you **started**, and your **initial amount** (your starting capital).
- 2 Now and then, press **Record balance** to log what it's worth today.
- 3 Use **Contribute** or **Withdraw** when you add or take out money — these don't count as growth.
- 4 Read the growth figures for **1 month**, **3 months** and **1 year**, plus all-time growth beside the name.
- 5 Press **Project** to look ahead — see the next page.
- 6 The **Show** chips and **Sort** menu (also on Income and Expenses) let you hide the cards or quick-edit list and order portfolios by name, amount or start date.

SOLO LEDGER · HOW TO USE THE APP

6

Projections

Solo Ledger doesn't only record the past — it estimates where your money is heading, using **your own numbers**. There's no target to guess at: it reads how each portfolio has actually grown and carries that forward.

- 1 On any portfolio, press **Project**. The panel opens with the growth rate Solo Ledger worked out from your history — measured carefully, so money you *added* isn't mistaken for money you *earned*.
- 2 Not enough track record to trust it? Type your own **annual growth %** to override the estimate — or press “**use my history instead**” to switch back.
- 3 Add a **monthly contribution** to see how a steady top-up compounds over time.
- 4 Read where it could land in **1, 3, 5 and 10 years** — the figures update live as you type.
- 5 Your **Dashboard** rolls every portfolio into a single forward line on the net-worth chart, with 1, 3 and 5-year marks.

Compounded at 5% a year plus N\$ 500.00/mo. An estimate from your own numbers — markets don't move in straight lines.

Save assumptions

Cancel

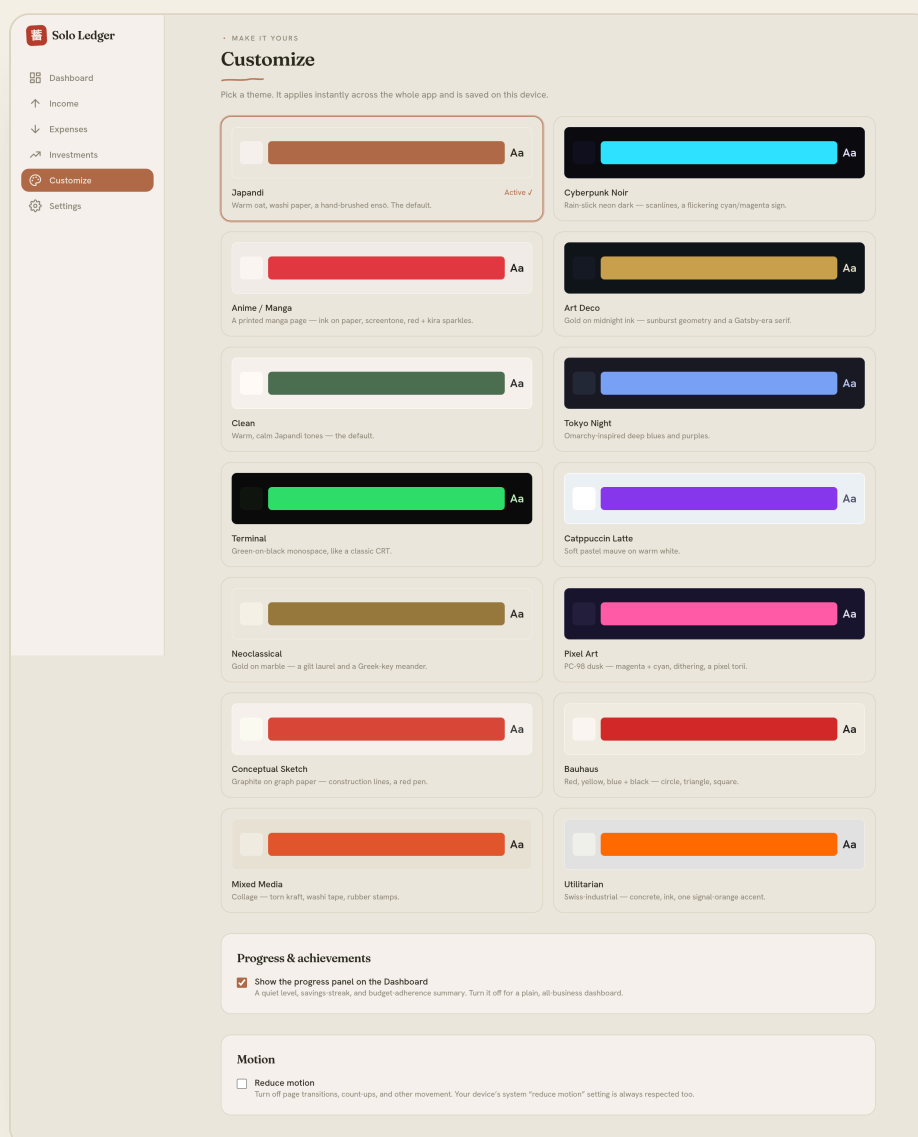

The projection panel — an editable rate, a monthly contribution, and a live 1/3/5/10-year preview.

An estimate, not a promise. Markets don't move in straight lines. A projection assumes steady growth, so read it as the *shape* of where you're heading — a guide, not a guarantee.

Choosing a theme

Solo Ledger ships with fourteen full visual "worlds". Pick whichever fits your mood — it applies instantly and is remembered on this device.

- 1 On **Customize**, click any theme to switch the whole app. The active one is ticked.
- 2 Toggle **Show the progress panel** off for a plain, all-business dashboard.
- 3 Turn on **Reduce motion** to calm animations (your device's own setting is always respected too).

Settings & backup

Settings is where you match the app to your own money — and, most importantly, where you keep your data safe.

- 1 Set your **currency symbol** (shown beside every amount) and **currency code**, then press **Save**.
- 2 Enter your **starting balance** — your real bank balance today — so the rolling ledger lines up with reality. The preview shows how it'll read.
- 3 Under **Reminders**, choose to be nudged **3 months** and/or **1 month** before a yearly expense is due, so a big bill never surprises you.
- 4 Optionally **Enable browser notifications** to be alerted by your device, not just inside the app.
- 5 Use **Export backup** to save all your data to a file, and **Import backup...** to restore it on a new device.

Reminders

Yearly expenses are easy to forget. Get a heads-up before each one is due so you can set the money aside in time.

☒ 3 months before

An early warning while there's still plenty of time to save.

☒ 1 month before

A final nudge as the due date approaches.

Browser notifications

Optional. Reminders always show inside the app; allow notifications to also be alerted by your device.

Enable browser notifications

Backup

Your data lives only in this browser. Export a backup file to keep it safe, and import it to restore everything on a new device or after clearing your data.

Export backup

Import backup...

 Your data is stored only on this device, in this browser. It never leaves your device and is never sent to any server. Export a backup regularly so you can restore it if you clear your browser or switch devices.

Back up regularly. Because everything lives only in this browser, clearing your browser data or switching devices will lose it. A backup file is the only way to move or recover your ledger.
